

## Handling Instructions

### Celova® Microfibrillated Cellulose Gels

Celova® gel products are aqueous suspensions of 3% microfibrillated cellulose and 97% water. After production the products are disinfected and have a shelf-life of 6 months in their original, sealed packaging. To preserve the naturality of Celova® products no biocides are added. That means any contamination can lead to microbial growth. To ensure the quality over time certain rules apply for handling.

#### Contamination Risks:

Opening of original, sealed containers

Taking samples

Container left open after use

Transfer of product into smaller containers

Condensation water

#### Handling Recommendations:

Mix before use to homogenize

Disinfect any tools or containers with 70% Ethanol

Store at ambient temperatures

Do not store in direct sunlight

Ideally use the whole container at once
